Dear Reader:

I am unequivocally opposed to antibiotics that are used in the treatment of disease in humans being added to livestock feed. Although the use of antibiotics in animal feed may be cost-effective in the short run by partially counteracting the pitiful living conditions most animals on corporate farms are subjected to, thus lowering the cost of production, I believe that the long term effect of increasing human susceptibility to disease costs the average consumer more. On a personal basis; I no longer consume animal products, mostly for health reasons. I would hate to think that the practices of the livestock and poultry industries could still have a detrimental effect on my health in addition to the massive pollution that they cause. Please enact a policy forbidding the use of antibiotics in animal feed that are also used in human medicine. Thank you.

Sincerely,

Matthew A. Roman
